MARCUS DSC

Digital Security Control

SECURITY | MANPOWER | READINESS

OUR PHILOSOPHY

According to our company's core philosophy, success and results can only be achieved through quality work, which requires excellent colleagues and continuous development. Marcus Security, keeping these principles in mind, dedicates significant resources to training and appreciating colleagues, as well as to discovering and applying innovative solutions.

In the 21st century, effective property protection is inconceivable without digital security technology. The proper combination of personnel and technology can guarantee optimal efficiency and cost-effectiveness.

DIGITALLY COORDINATED LIVE SECURITY

6 areas where the mobile app is useful for you:

Checkpoints: During patrol inspections, the time of patrol is recorded, and the reports and tasks issued during the inspection can also be tracked. This allows for precise monitoring of inspections and performance transparency.

Event Reporting: When recording events, even with voice input since our system is capable of speech recognition, pre-designated responsible managers receive an email notification containing the report, photos, and signatures. This ensures quick and effective communication.

Visitor Access: the access control device gives our guests the option to read statements about GDPR, occupational safety or internal security regulations (available in multiple languages), which they can confirm by signing. The application also allows detailed documentation of the items they carry. Hosts can pre-register their guests, so the security guard can be notified about expected visitors, making the entry process smoother.

Vehicle Access: In our online system, the name of the driver, company, contact details, issued visitor card number, license plate number, and shipping documents can be recorded by dictation or as a photo. Additionally, photos of the cargo hold, cargo securing, and any damaged items or seals can be attached. This makes vehicle access transparent and secure.

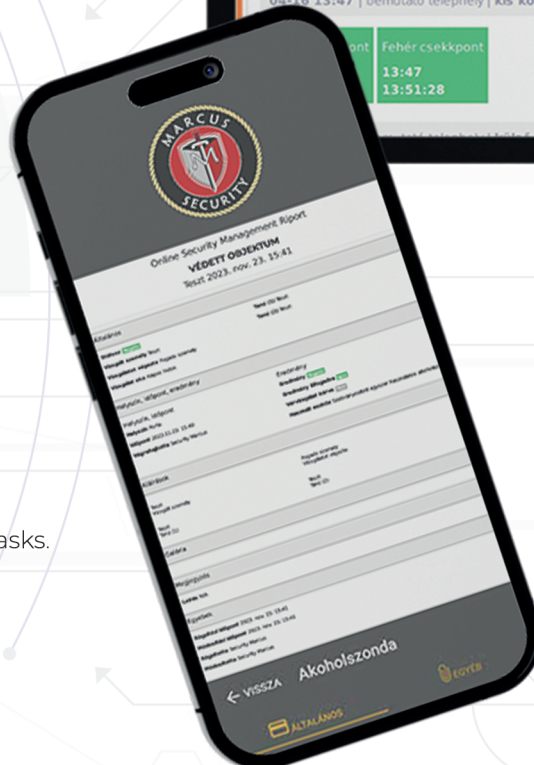

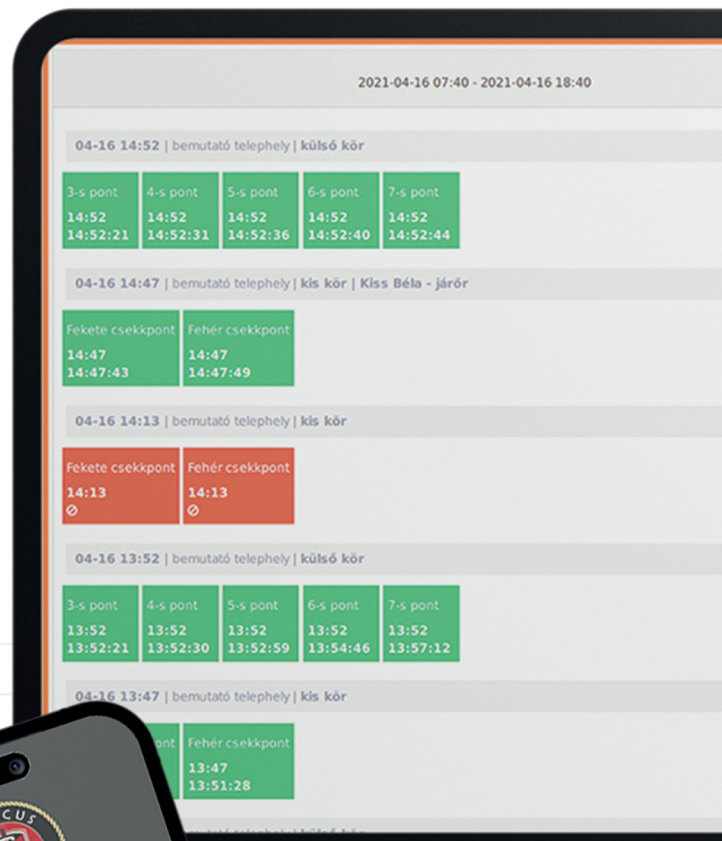

Alcohol Testing: Our online system allows for digital documentation, storing the declaration and signature of the person tested, as well as the data and signatures of witnesses. This makes documenting alcohol tests simpler and more credible.

Shift Handover: Through our system, the handover and takeover of security equipment, shipments, packages, and service information between security guards can be easily managed. In addition to signatures, any damages and injuries can also be documented, ensuring the entire process's transparency and safety.

DIGITAL SECURITY CONTROL

Trust us with the inspection, we won't sugarcoat the facts!

With our digital monitoring system, you can track and evaluate the quality of our service at any time of the day. Take advantage of this opportunity and find out in real-time what's happening at your site!

What data can you access?

- Patrol contact details.
- The times when the patrol staff performed their tasks.
- All data recorded during the inspection.
- Real-time footage of the monitored site.
- A backtraceable online log that can be exported to formats for presentation.

A unique opportunity for 24/7 monitoring.
